Otium Wireless Sports Headphones looks so much like Apple Beats headphones so much See how it works with the iPhone 6 itself. The setup process is very simple and simple. It is recommended to fully charge the headphones first - you can see that it is charging from a small LED light on the side. When fully charged, the LED goes from normal red to solid blue. Next, you need to turn on Bluetooth on the iPhone 6. Holding the power button otium Wireless Sports Earbuds for a few seconds, the headphones will turn on. If you're wearing headphones, you can hear him say Power On. At this point, it can be detected via Bluetooth and you can see the 'otium beats' show under other devices. Once you click on 'otium beats', you will start pairing Otium Wireless Sports Earbuds with iPhone 6.While wearing Otium Wireless sports headphones, you can hear the voice say connected, confirming that the Bluetooth pairing is successful. In the future, all I need to do is to use headphones to turn on Bluetooth on the iPhone 6 and turn on the headphones and they will be automatically paired with headphones talking in the ear Turn, connected!. After using these headphones to widely stream music, watch TV shows, and play games, while I am not an audiophile I personally found these headphones to be very satisfying. The lack of cord is also very handy-nothing confusing, but then I often forget to bring my phone sometimes and I take a lot of feet before I realize that I have left the phone behind. There are some minor problems that I found with Otium Wireless sports headphones running with the iPhone 6. When the headphones initially connect to the iPhone sometimes the audio is choppy for a few seconds, but then the choppy goes away after that. In addition, there is a slight mismatch in the audio levels on the iPhone 6 and Otium Wireless sports headphones. The image below shows the level at which the headphones no longer emit sound. Basically the first increment of the past dumb still does not radiate audio. Finally, when listening to music at night, when everything is quiet, the headphones may seem a little louder than necessary, but not disgustingly so. Otium Wireless sports headphones usually works great with the iPhone 6, which is to be expected given that Otium is positioning these headphones as an inexpensive Beats PowerBeats2 wireless alternative. Any information we collect from you can be used in one of the following ways: to process transactions, your information, whether public or private, will not be sold, exchanged, transferred or transferred to any other company for any reason, without your consent, except for the explicit purpose of delivering the requested product or service.
